

EDUCATION:

BSC, Computer Science | Daffodil International University, CGPA 3.29 | June 2022

SKILLS:

Analytical Tools:

- Power BI
- Tableau
- Advanced Excel

Programming Languages:

- SQL (Structured Query Language)
- Python

Database:

- MySQL
- PostgreSQL

Experience:

Nov 2024 – Oct 2025

Data Solution 360, Dhaka – Junior Data Analyst

- Worked on 2 real-world business analytics projects in the FMCG domain using Power BI, Excel, SQL, and Python.
- Performed **ad-hoc analysis**, **secondary research**, and delivered detailed project reports.
- Mentored junior analysts by conducting live sessions and providing guidance on data analytics tools, techniques, and best practices.

PROJECTS:

Superstore Sales Analysis - [Power BI | Excel | Dax] [Link](#) June 2024

- Developed an interactive Power BI dashboard to analyze Superstore sales and customer insights. Showcased key metrics, segment trends, and regional performance to support data-driven decisions. Applied data cleaning, visualization, and storytelling techniques for business growth insights.

Customer Churn Data EDA Project - [Python] [Link](#) December 2024

- In this project, I performed exploratory data analysis (EDA) on customer churn data using Python to uncover key trends and patterns. I visualized insights using libraries like Matplotlib and Seaborn to better understand customer behavior and churn factors.

P&L Report - [Excel | Pivot Table | Power Query] [Link](#) December 2024

- Generated a comprehensive P&L report for the Company's FY 2022, utilizing advanced features in Excel such as Pivot Tables and DAX to provide granular insights into revenue streams and expense categories.
- Automated data cleaning using Power Query, saving approximately 4 hours of manual effort.
- Deployed DAX-based calculation models, resulting in a 30% increase in report accuracy and providing users with more detailed and adaptable insights.

Data Analysis E-Commerce Project - [SQL | Python] [Link](#) January 2025

- Conducted data analysis on an e-commerce dataset using Python, performing data cleaning and visualizations to uncover customer behavior and sales trends. Created insightful charts to support company growth strategies and informed decision-making.

Sales Data Analysis - [Python] [Link](#) January 2025

- Analyzed sales data using Python to uncover customer purchasing patterns based on gender, product preferences, and average pricing. Performed EDA and created clear visualizations to make the data easier to understand.

Sales Insights – Brick & mortar business - [Power BI | Advanced DAX | SQL] [Link](#) March 2025

- Designed a Power BI dashboard to understand the last four years of hardware sales trends.
- Led the initiative of displaying the sales trend of Company hardware, allowing users to understand the data and make informed decisions.
- Created a dashboard projected to increase revenue by at least 7% in the next quarter.

FMCG Sales & Promotion Analysis Dashboard - [Power BI | DAX | Power Query | Ad-hoc Research] [Link](#) July 2025

- Developed an interactive dashboard for a retail FMCG chain (Company) to analyze store performance, promotional impact, and category-wise sales. Identified ₹123M revenue from top-performing promotions and uncovered loss of

₹11.7M from underperforming promos 25% off. Delivered actionable insights using DAX, geospatial visuals, and dynamic filters.

Customer Cohort and retention Analysis - [Power BI | Advanced DAX] [Link](#)

August 2025

- Developed an interactive cohort analysis dashboard to track weekly and monthly customer retention trends using cohort-based reporting.

Bank Customer Churn Analysis – [Power BI | Power Query | Advanced DAX | Excel] [Link](#)

October 2025

- Built an interactive dashboard to explore why 20.4% of customers are leaving the bank, helping the team focus on retention strategies.
- Analyzed how personal factors like age and credit scores influence loyalty, identifying that the 51-60 age group has a significantly higher risk of leaving.
- Visualized customer behavior across France, Germany, and Spain to see how location and active status affect a person's relationship with the bank.
- Transformed thousands of data points regarding account balances and product usage into clear, visual stories that make it easy to spot at-risk accounts.

Student Exam Performance Analysis – [BigQuery | SQL | Power BI] [Link](#)

November 2025

- Built a Power BI dashboard to help educators monitor 300+ students, making it easy to see at a glance why the pass rate sits at 71%.
- Created a system to compare first and last attempt scores, showing exactly how students improve or where they get stuck over time.
- Designed simple, interactive charts that track daily attendance and rank student progress, turning messy data into a clear story.
- Cleaned and connected over 1,300 exam records using DAX and Power Query to ensure all performance metrics were accurate and easy to follow.

Sales & Delivery Performance Analysis – [SQL | Power BI | Power Query | Advance DAX | Excel] [Link](#)

January 2026

- This interactive Power BI dashboard to give management a clear picture of business performance using key metrics like total revenue, profit, profit margin, and average delivery time across global markets.
- Analyzed online and offline sales channels and regional performance to understand where the business is performing well and where profitability is weak.
- Created delivery-focused visuals to track on-time vs delayed orders, delayed order percentage, and high-priority delays, helping identify operational pain points.
- Used time-based trends to compare yearly performance, highlight strong and weak periods, and support data-driven business decisions.

CONFERENCE PUBLICATION:
